Federal Agency Strategic Sustainability Performance Plans

Under Executive Order 13514, Federal agencies are required to develop, implement and annually update a plan that prioritizes actions based on a positive return on investment for the American taxpayer and to meet GHG emissions, energy, water, and waste reduction targets.

Agencies released their fourth annual Sustainability Plans in October 2013. In these updated plans, agencies discuss highlights and challenges from the previous year, and, based on these results, how they will refine their strategies, expand on successes, and plan new initiatives to meet the Executive Order goals.
