1 GW Goal For Civilian Agencies by 2021

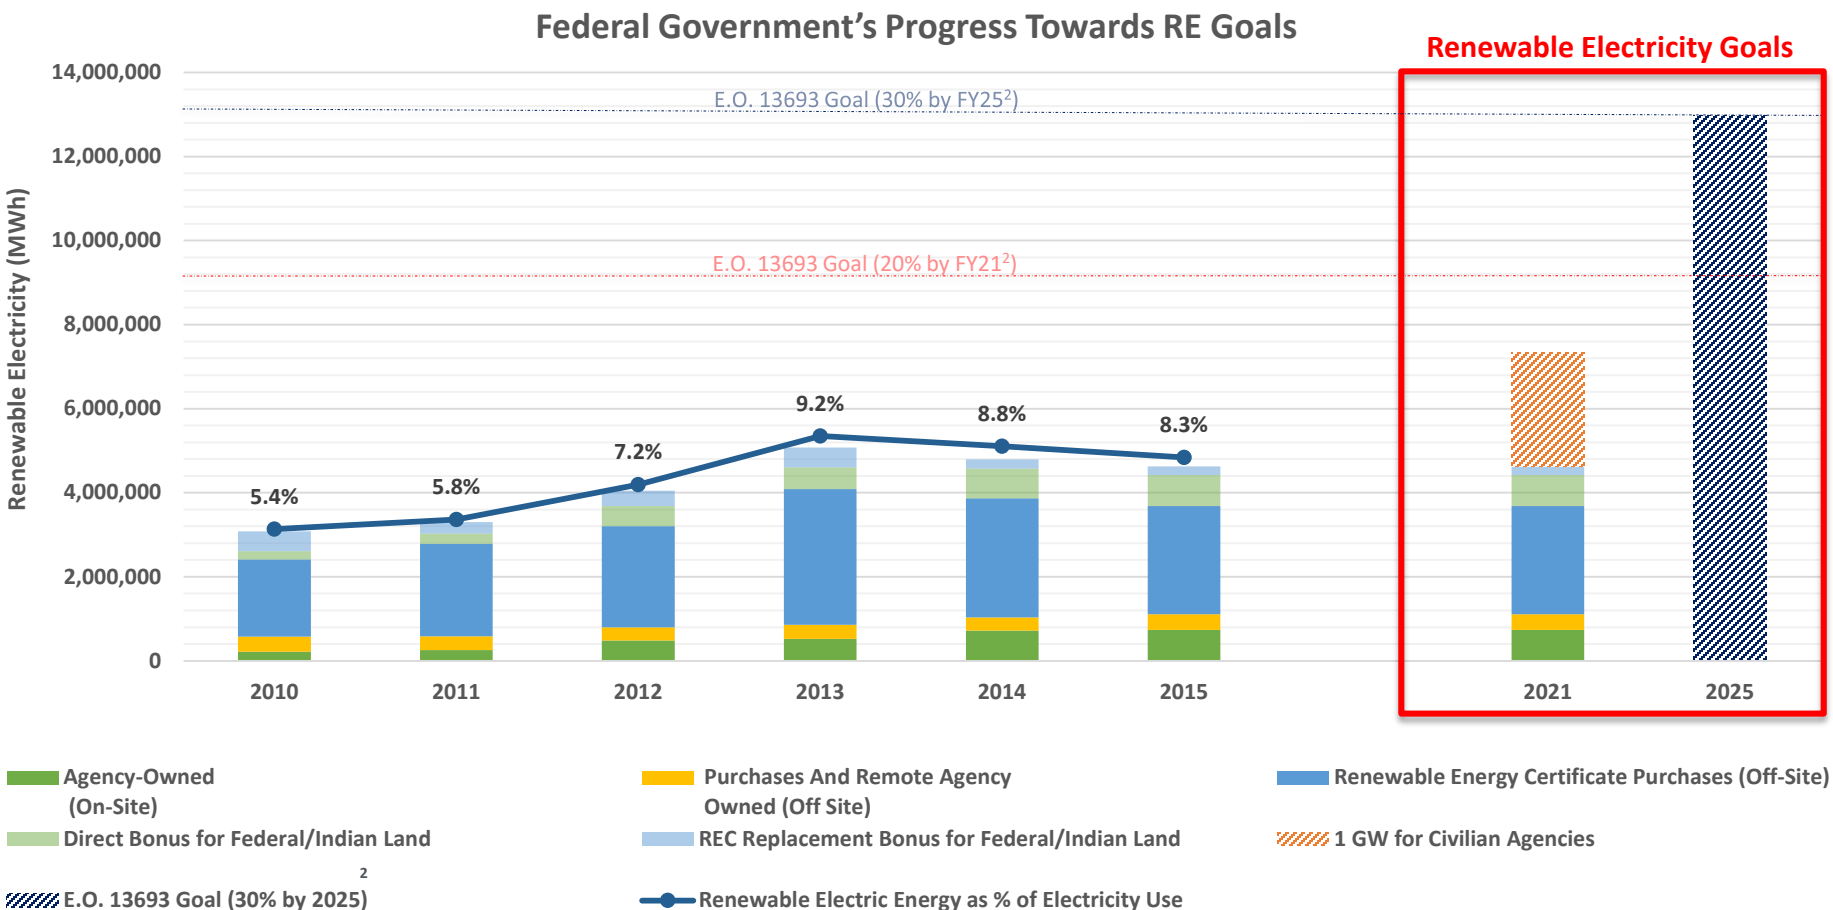

On October 14, 2016, the White House announced a 1 Gigawatt Renewable Electric Energy Goal for civilian agencies by 2021¹.

- All additional renewable electric energy (RE), from a FY15 baseline, reported in FY21 counts.
- All strategies for obtaining RE, in order of priority ranking as defined in Executive Order (E.O.) 13693 count.
- The 1 GW Goal will help civilian agencies stay on track towards achieving the E.O. 13693 RE target.
- More details on the 1 GW Goal from the Council on Environmental Quality are expected to be announced soon
 - FEMP is providing recommendations to CEQ on the goal structure

Federal Government's Progress Towards RE Goals

Civilian agencies will need to generate or purchase an additional 2,700,000 million MWh¹ of renewable electric energy to meet the 1 GW goal by 2021.

¹ Estimated based on the proportion of renewable electric energy sources in FY15.

² Estimated renewable electric energy consumption target, if the federal government reduces its energy consumption by 2.5% each year and the federal government's building footprint remains unchanged from FY15.
